

# Heart & Soil™ Ag Products

WOOD ASH • BIOSOLIDS • PAPER FIBER • ENGINEERED TOPSOIL

## Highway View Farm Boscawen, NH

In a time where farms are being sold off because of economic uncertainty, the Crete family is continuing to exceed the level of excellence that began two generations ago and is hoping to pass those traditions on to the next generation.

Highway View Farm is a progressive farm that excels in breeding, milking and crop production, is a top dairy producer in NH. For nearly 15 years, Highway View and RMI have partnered to create nutrient management strategies which allow the farm to save money while increasing production.

While primarily a user of **Biosolids**, a slow-release fertilizer, Highway View has benefitted from using many of the products in RMI's **Heart & Soil**® product line. **Biosolids**, used primarily for its ability to release nutrients throughout the year, is far less expensive than commercial fertilizers, making it an economically sustainable alternative.

Highway View Farm is RMI's largest permitted farm and working with RMI has allowed the Crete family and Highway View Farm the ability to maintain that level of excellence and increase production in uncertain economic times.

*"...it's much more economically feasible, as opposed to buying all commercial fertilizer – which would add a big stress to the farm."*

*Adam Crete, Highway View Farm, Boscawen, NH*
