

Your Source For Wood Ash

Renew soil productivity and pH balance—sustainably

Wood Ash is produced in the Northeast and is the best organic source of **potassium**, fast acting **lime** (CaCO_3), and **micronutrients** essential for healthy vegetative growth. Wood Ash quickly raises soil pH, making nutrients more readily available to plants. RMI's Wood Ash is USDA compliant and is **OMRI Listed**[®] for use by organic growers, No. hts-4212.

Wood Ash is available by the tractor-trailer load. To assist with your Wood Ash application, RMI offers spreader rentals as well as spreader delivery services.
